

S I G N P O S T

The Grass IS Greener

We met the challenge of creating one of the most original and complicated designs and fabrications we've ever encountered. Our journey took us to Tampa, Florida for the opening of the architectural wonder. "Wiregrass."

From 25' fiberglass sheathed "blades of grass" illuminated by changing multi-color Kinetic Light Systems to full-color, translucent directories framed with cut-out, welded aluminum accent blades to internally illuminated pole supports mimicking growing grass stalks, the range of detail and depth of professionalism compares to the best craftsmanship in our profession.
